

Dynamics 365 Customer Service

2019 release wave 2
October 2019-March 2020

In this guide, you will be able to learn the most important things about this release wave. These will help you plan to onboard the release updates with confidence.

Top things to know

New capability highlights

The **2019 release wave 2**, brings to market significant new services and capabilities to enable digital transformation for businesses. For Dynamics 365 Customer Service, these new capabilities include:

- **Knowledge management enhancements** will benefit knowledge authors, customer service agents, and customers with new search, inline editing, and knowledge article templates.
- **Timeline usability enhancements.** Updates to the timeline experience will enable customers to see larger amounts of information and filter to see specific activities. Sales managers, salespeople, and customer service agents who are looking at the history of interactions with an account, contact, or case will benefit from the ability to find data more quickly.

Key milestones

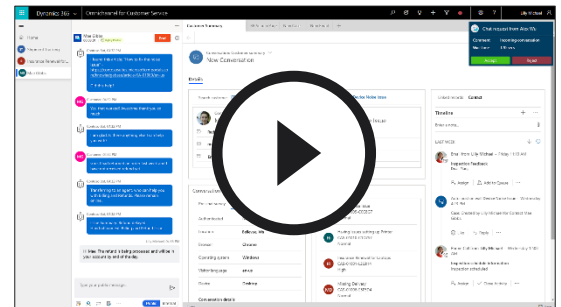

Get prepared to onboard the new 2019 release wave 2 updates with confidence. Early access to this release wave, October update, will start on **August 2nd, 2019** and will be generally available on **October 1st, 2019**.

For application administrators

End-user impacting features should be reviewed by application administrators. This facilitates release change management and enables successful onboarding of new capabilities released to market. Look for all features tagged "End users, automatically" in the release plan.

Dynamics 365 Customer Service

2019 release wave 2
October 2019-March 2020

New capability highlights

These capabilities outline our commitment to deliver on our roadmap priorities. To learn more about the entire set of capabilities being delivered during this release wave, visit: aka.ms/ROGCS19RW2RP

Knowledge management enhancements

Investments in improving knowledge management will benefit knowledge authors, customer service agents, and customers.

Knowledge management search and rendering enhancement

Currently knowledge base search control supports filtering only on status and language of articles. To provide a better knowledge search experience for agents, this feature extends the filtering capability to other attributes.

Knowledge management inline image enhancement

Knowledge authors will be able to author more easily. The ability to create professional presentations of articles will help drive self-service adoption by making knowledge base articles more effective at shifting customers toward self-help. Knowledge authors will have an improved inline image experience in which they can directly copy, paste, and drag and drop images, or select them from File Explorer and add them to knowledge articles, instead of sourcing them from links, as is done today.

Knowledge article templates

Customers will get out-of-the-box templates that they can readily use. They will also have the ability to create, edit, or delete templates as per the needs of the business. Knowledge authors in the customer's organization can use these templates to quickly create knowledge articles.

Timeline usability enhancements

The current timeline experience provides users with an overview of notes and activities associated with the entity for which it is shown (case, account, contact, and so on). However, the interaction model and a lack of information density prevent users from finding the information that they need efficiently.

Updates to the timeline experience will enable customers to see larger amounts of information and filter to see specific activities. Sales managers, salespeople, and customer service agents who are looking at the history of interactions with an account, contact, or case will benefit from the ability to find data more quickly.

Timeline enhancements include the following:

- Improved information density for greater visibility of items without the need to scroll.
- Improved filtering by activity type, ability to set multiple filters simultaneously, and visual indications that the list is filtered.
